PROFESSIONAL SUMMARY

Software Developer and AI Engineer. I build AI-powered products that solve concrete problems: filtering what's urgent out of hundreds of notifications, turning study notes into practice quizzes, detecting bank fraud with fewer false alarms. I took my project OpenRuleta to tech community events (KCD, Ekoparty, Data Saturday LATAM), where I presented and ran it live with hundreds of attendees. I also attend Nerdearla and talks by AWS, OpenAI Codex, and Microsoft (AI and GitHub Copilot), and take part in hackathons. As a teaching assistant at UNSAM I support student teams in their architecture decisions. I work full-stack (TypeScript and Python) with serverless deployment on AWS.

WORK EXPERIENCE

Teaching Assistant
Universidad Nacional de San Martín
Jun 2026 – Present

- Help each team choose the right database for its problem (relational, document, or cache) and justify the decision
- Guide students to keep their projects decoupled and maintainable, ready to grow toward microservices
- Turn complex technical concepts into simple explanations adapted to each student's level

Software Developer
Freelance
Jan 2026 – Present

- Deliver custom solutions where AI is part of the process, not an add-on: it automates repetitive tasks and simplifies the user's work
- Prioritize secure, scalable solutions with controlled infrastructure costs (serverless on AWS)
- Take my own products from idea to real use: OpenRuleta ran live at events with hundreds of people

Administrative Specialist
Fabric SRL
Jan 2025 – Dec 2025

- Built operational reports with direct SQL queries on the production database, keeping business data at hand for decision-making
- Managed day-to-day accounting with Xubio (checks, transfers, and inventory), ensuring data accuracy

Customer Service Representative
Banco de la Nación Argentina
Feb 2024 – Aug 2025

- Resolved high-volume queries with internal systems, explaining banking processes to non-technical customers
- Handled sensitive customer information following strict security procedures

PROJECTS

Prioria github.com/LorenGrz/Prioria
Stack: React Native, Expo, TypeScript, AWS serverless (Lambda, Bedrock, DynamoDB, Cognito, SQS, Polly, SAM), Strands Agents

- Solves notification overload: an AI agent detects what's urgent and reads it aloud, so users don't need to check their phone
- Learns from every user response (thumbs up/down and conversation with the agent) to prioritize better over time
- 100% serverless infrastructure: near-zero cost when idle and scales on its own as demand grows

StudyQuest github.com/LorenGrz/StudyQuest
Stack: React, TypeScript, NestJS, Socket.IO, Amazon Bedrock, PostgreSQL, DynamoDB, AWS S3, AWS Lightsail, Docker Compose

- Turns notes and PDFs into playable quizzes in minutes, saving the manual work of building practice material
- Real-time group study: matchmaking, rooms, and chat to practice with other students
- Swappable AI provider to pick the model per user plan and keep costs under control
- Every change is specified before it is coded (Spec-Driven Development), reducing rework

OpenRuleta github.com/LorenGrz/OpenRuleta

Stack: Next.js, React, TypeScript, Supabase, PostgreSQL, Tailwind CSS, pnpm workspaces

- Presented and run live at KCD, Ekoparty, and Data Saturday LATAM Argentina 2026 (~300 concurrent sign-ups from phones at the latter)
- Zero infrastructure cost: everything runs on Supabase's free tier
- Secure by design: the public form can only register entries and never read other participants' data

FraudDetector github.com/LorenGrz/FraudDetector

Stack: Python, FastAPI, scikit-learn, SQLAlchemy, SQLite, Plotly

- Cuts false alarms by ~35% versus a single model: a customer is flagged only when at least 2 of 3 models agree
- 40–150 ms responses per analysis, fast enough to review cases on the spot
- Visual dashboard so a non-technical analyst can understand why a customer is risky

BookLibre github.com/LorenGrz/BookLibre

Stack: React, TypeScript, Kotlin, Spring Boot, PostgreSQL, MongoDB, Redis, Docker Compose

- Teamwork with a pull-request and code-review flow, as in a professional team
- Each kind of data in the database that suits it best (relational, document, and cache) so the app responds fast
- Secure sessions between frontend and backend hosted on different domains

EDUCATION

Bachelor's Degree in Software Development (Licenciatura)
Universidad Nacional de San Martín
In progress

Associate Degree in Computer Programming (Tecnicatura)
Universidad Nacional de San Martín
Jul 2026

SKILLS

AI and Agents: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), AI agents and subagents, Spec-Driven Development (SDD), Amazon Bedrock, Strands Agents, Google Gemini API, Claude Code

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS

Mobile: React Native, Expo

Backend: Node.js, NestJS, Python, FastAPI, Kotlin, Spring Boot, REST APIs, WebSockets (Socket.IO)

Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Supabase, SQLite, SQL

Cloud: AWS (Lambda, API Gateway, Bedrock, DynamoDB, S3, SQS, Cognito, Polly, Lightsail, AWS SAM), Google Cloud (Gemini API)

DevOps and Tools: Docker, Docker Compose, GitHub Actions, CI/CD, Git, Linux

ADDITIONAL INFORMATION

Languages: Spanish (native), English (technical, reading and writing) | Immediately available: on-site, hybrid, or remote | Own vehicle and valid driver's license
