

Lorenzo Graizzaro

Software Developer | AI Engineer

Buenos Aires, Argentina | +54 11 6027-7080 | lorenzograizzaro55@gmail.com | linkedin.com/in/lorenzo-graizzaro | github.com/LorenGrz | lorengrz.github.io

PROFESSIONAL SUMMARY

Software Developer focused on AI Engineering. I build full-stack applications with built-in AI: agents with Amazon Bedrock and Strands Agents, LLM generation, RAG, and MCP servers. Core stack: React, TypeScript, NestJS, Python/FastAPI, and Kotlin/Spring Boot, with SQL and NoSQL databases and serverless deployment on AWS. I work with Spec-Driven Development and agentic environments (Claude Code with subagents) to own architecture decisions.

SKILLS

AI and Agents: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), AI agents and subagents, Spec-Driven Development (SDD), Amazon Bedrock, Strands Agents, Google Gemini API, Claude Code

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML, CSS

Mobile: React Native, Expo

Backend: Node.js, NestJS, Python, FastAPI, Kotlin, Spring Boot, REST APIs, WebSockets (Socket.IO)

Databases: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB, Supabase, SQLite, SQL

Cloud: AWS (Lambda, API Gateway, Bedrock, DynamoDB, S3, SQS, Cognito, Polly, Lightsail, AWS SAM), Google Cloud (Gemini API)

DevOps and Tools: Docker, Docker Compose, GitHub Actions, CI/CD, Git, Linux

PROJECTS

Prioria

github.com/LorenGrz/Prioria

Stack: React Native, Expo, TypeScript, Amazon Bedrock, Strands Agents, AWS Lambda, DynamoDB, AWS SAM

- Agent built with Strands Agents SDK and Amazon Bedrock that scores each notification against user rules and preferences, and learns from explicit feedback
- Serverless backend on AWS Lambda, API Gateway, Cognito, DynamoDB, and SQS, defined as infrastructure as code with AWS SAM
- Text-to-speech for critical notifications with Amazon Polly and a native Android widget

StudyQuest

github.com/LorenGrz/StudyQuest

Stack: React, TypeScript, NestJS, Socket.IO, Amazon Bedrock, PostgreSQL, DynamoDB, AWS S3, AWS Lightsail, Docker Compose

- LLM-powered quiz generation from PDF and DOCX files: Markdown conversion through a Python microservice (Markdown) and a pluggable AI provider (Amazon Bedrock by default, Google Gemini as fallback)
- Hybrid persistence: PostgreSQL with TypeORM for metadata and results, DynamoDB with TTL for quiz content, and S3 with presigned URLs for files
- Real-time matchmaking, study rooms, and chat over WebSockets (Socket.IO); NestJS API on AWS Lightsail with Docker Compose, Caddy (TLS), and least-privilege IAM
- Changes specified with OpenSpec before implementation (Spec-Driven Development)

OpenRuleta

github.com/LorenGrz/OpenRuleta

Stack: Next.js, React, TypeScript, Supabase, PostgreSQL, Tailwind CSS, pnpm workspaces

- Used live at Data Saturday LATAM Argentina 2026 with ~300 concurrent mobile sign-ups on Supabase's free tier
- Security through Row Level Security: the public app can only insert; the operator wheel uses the service key behind HTTP Basic Auth

FraudDetector

github.com/LorenGrz/FraudDetector

Stack: Python, FastAPI, scikit-learn, SQLAlchemy, SQLite, Plotly

- Ensemble of Isolation Forest, LOF, and K-Means: a client is flagged only when at least 2 models agree (~35% fewer false positives than a single model)
- REST API with FastAPI: 110–150 ms per client analysis and 40–60 ms per transaction

BookLibre

github.com/LorenGrz/BookLibre

Stack: React, TypeScript, Kotlin, Spring Boot, PostgreSQL, MongoDB, Redis, Docker Compose

- Polyglot persistence with PostgreSQL, MongoDB, and Redis behind a Kotlin + Spring Boot backend
- JWT authentication with HttpOnly cookies and SameSite=None for cross-origin sessions

WORK EXPERIENCE

Teaching Assistant

Universidad Nacional de San Martín

Jun 2026 – Present

- Guide the selection of storage technologies (PostgreSQL, MongoDB, Redis) based on each application's use case
- Teach separation of concerns and low coupling to design architectures that can evolve toward microservices

Software Developer

Freelance

Jan 2026 – Present

- AI as part of the process, not an isolated feature: automating tasks and optimizing workflows while prioritizing secure, scalable solutions

Administrative Specialist

Fabric SRL

Jan 2025 – Dec 2025

- SQL queries on the production database for operational reporting
- Accounting management with Xubio: checks, transfers, and inventory control

Customer Service Representative

Banco de la Nación Argentina

Feb 2024 – Aug 2025

- High-volume query resolution using internal systems, following established procedures

EDUCATION

Bachelor's Degree in Software Development (Licenciatura)

Universidad Nacional de San Martín

In progress

Associate Degree in Computer Programming (Tecnatura)

Universidad Nacional de San Martín

Jul 2026

ADDITIONAL INFORMATION

Languages: Spanish (native), English (technical, reading and writing) | Immediately available: on-site, hybrid, or remote | Own vehicle and valid driver's license
